Robotics 1

Introduction

Prof. Alessandro De Luca

DIPARTIMENTO DI INGEGNERIA INFORMATICA AUTOMATICA E GESTIONALE ANTONIO RUBERTI

SAPIENZA UNIVERSITÀ DI ROMA

Robotics 1 – 2022-23

- First semester (13 weeks)
  - Wednesday, September 28, 2022 – Friday, December 23, 2022
- Courses of study (having Robotics 1 mandatory or as optional)
  - Master in Artificial Intelligence and Robotics (MARR)
  - Master in Control Engineering (MCER)
- 6 Credits
  - ~50 hours of lectures, exercises, and midterm test
  - 90 hours of individual study
- Classes (back in presence only: room B2, DIAG, Via Ariosto 25)
  - Wednesday 17:00-19:00
  - Friday 8:00-11:00

General information

- Prerequisites
  - self-contained course, without special prerequisites
  - elementary knowledge on kinematics, linear algebra, and feedback control is useful
- Aims
  - robot “anatomy”
  - provide tools for kinematic analysis of articulated chains of multiple rigid bodies (= robot manipulators)
  - analytical methods for planning motion trajectories
  - motion command and control algorithms
  - programming of tasks for robot manipulators in industrial and service environments

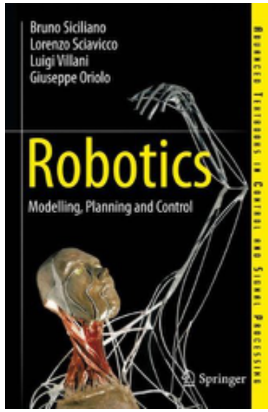
Organization and contacts

all hyperlinks in red are active in the pdf file

- G-group
  - join robotics1_2022-23 (your full name, uniroma1 email, course of study)
  - ask questions, comment on my replies (for the benefit of everyone!)
- Email deluca@diag.uniroma1.it
- Office hours for students
  - Tuesday 12:00-13:30 (check exceptions, e.g., when I'm on travel)
  - in presence: Room A-210, floor 2, left wing, DIAG, Via Ariosto 25
  - remote: Meet meet.google.com/chp-fghs-fri
- YouTube
  - personal channel: playlists with recorded videos of selected lectures recorded during the pandemic (2019-20 and 2020-21)
  - access restricted to Sapienza students in G-group of the course!

Course materials

- Textbook
  - B. Siciliano, L. Sciavicco, L. Villani, G. Oriolo: *Robotics: Modelling, Planning and Control*, 3rd Edition, Springer, 2009
  - English, Italian, Chinese & Greek editions

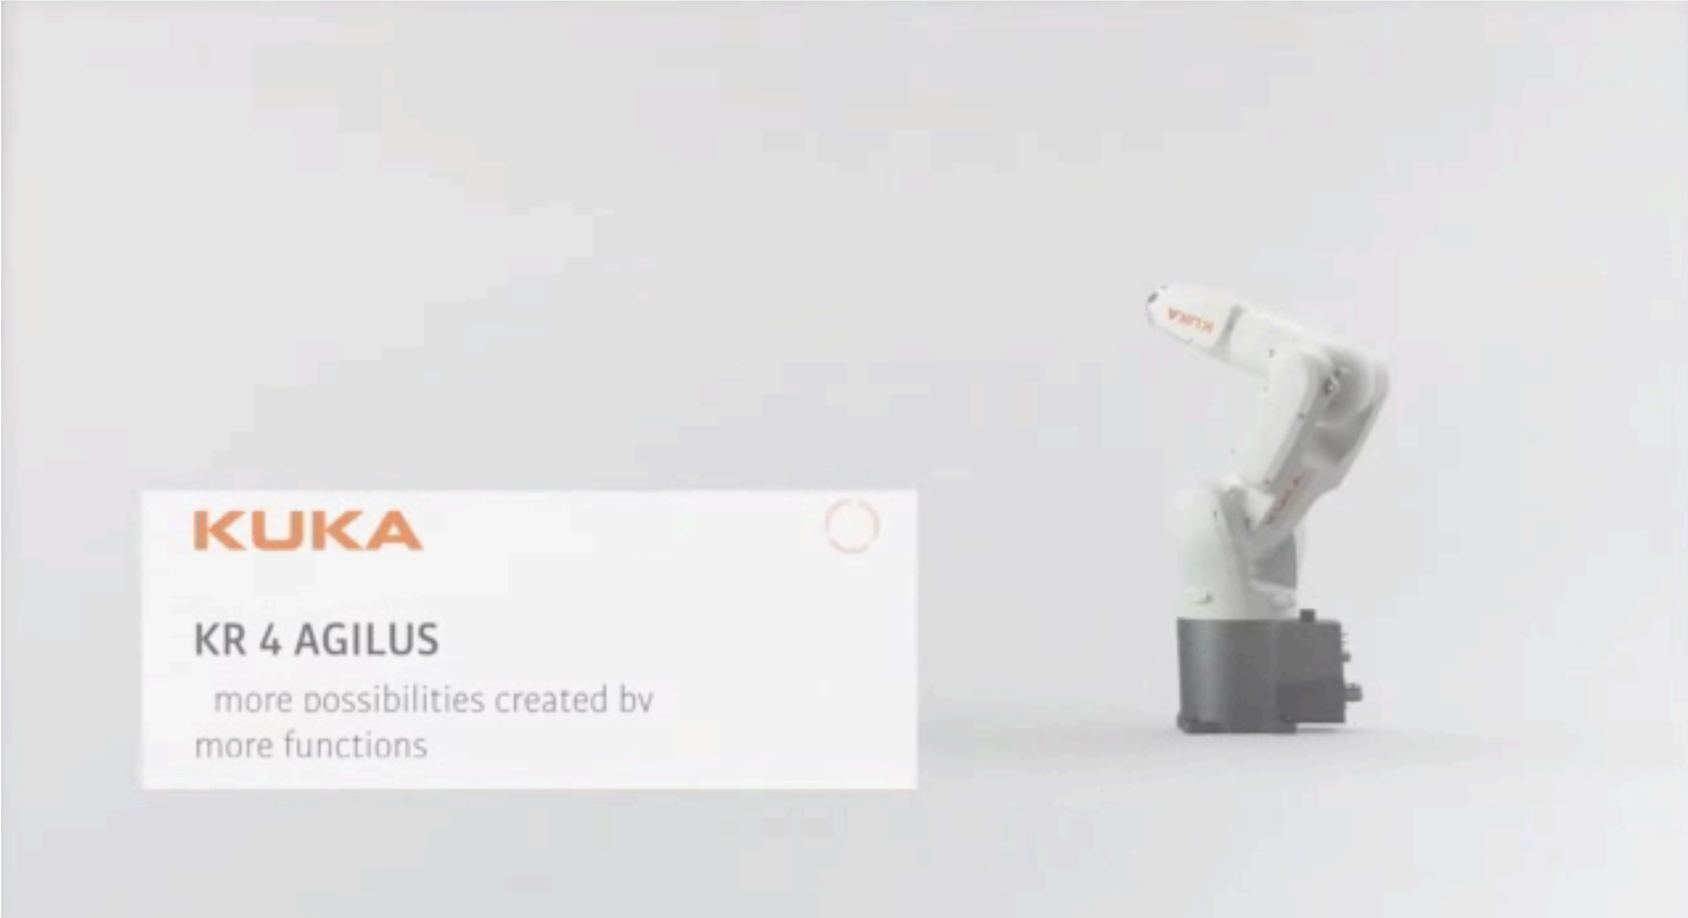


- Course website www.diag.uniroma1.it/deluca/rob1_en.php
  - pdf of lecture slides ready (with some updates during the course)
  - all videos shown during lectures (in zipped folders by block of slides)
  - written exams (most with solutions), syllabuses, extra documents, …
- Video DIAG Channel playlist Robotics 1 with full course of 2014-15
  - 30 (+1 index) videos in classroom (≅ 41h, **>105K** independent views)
- DIAG Robotics Lab Channel with more research videos
  - www.youtube.com/user/RoboticsLabSapienza

A robot manipulator

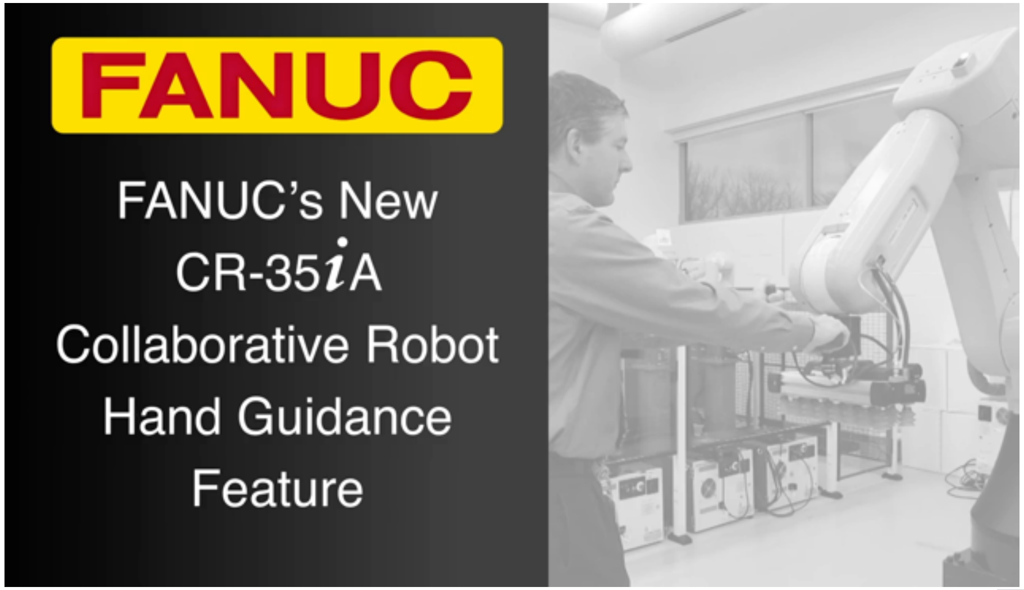
Illustrating typical features of an industrial robot

commercial video



KUKA KR 4 Agilus robot with 6 revolute joints

Industrial vs. service robots



FANUC CR35i 6R collaborative robot
carrying up to 35 kg of payload
and with hand guidance system

video

video

qbrobotics SoftHand2
dexterous robot hand
with only 2 motors on board
and compliant transmissions

Programming robot motion

Teaching Cartesian poses and playing them back

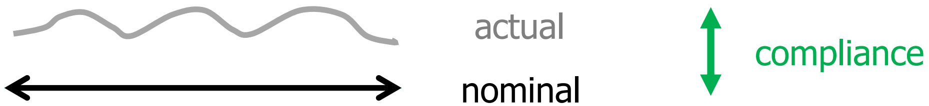
video

KUKA LBR iiwa robot with 7 revolute joints

Programming robot motion

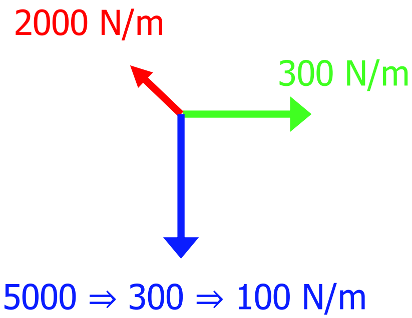
Executing nominal trajectories and "complying" with uncertainties

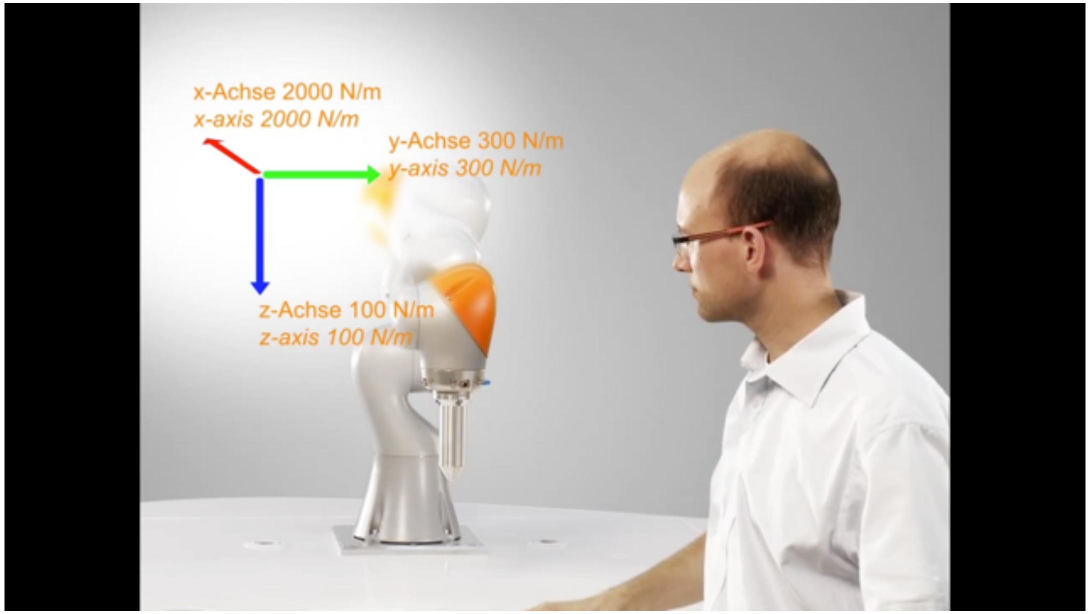
video



Programming robot compliance

Controlled reaction to applied forces/torques at robot end-effector





video

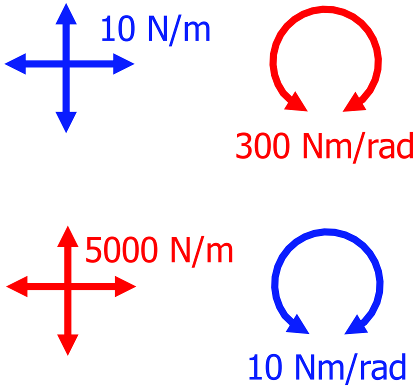
$$\Delta p \rightarrow F = K\,\Delta p$$

stiffness

vs

compliance

$$F \rightarrow \Delta p = C\,F$$
$$= \frac{1}{K}\,F$$



video

Programming robot motion

Teaching tasks by demonstration (kinesthetic learning)

video

sketch of the original idea
— a possible use of safe
physical Human-Robot Interaction (pHRI)

video

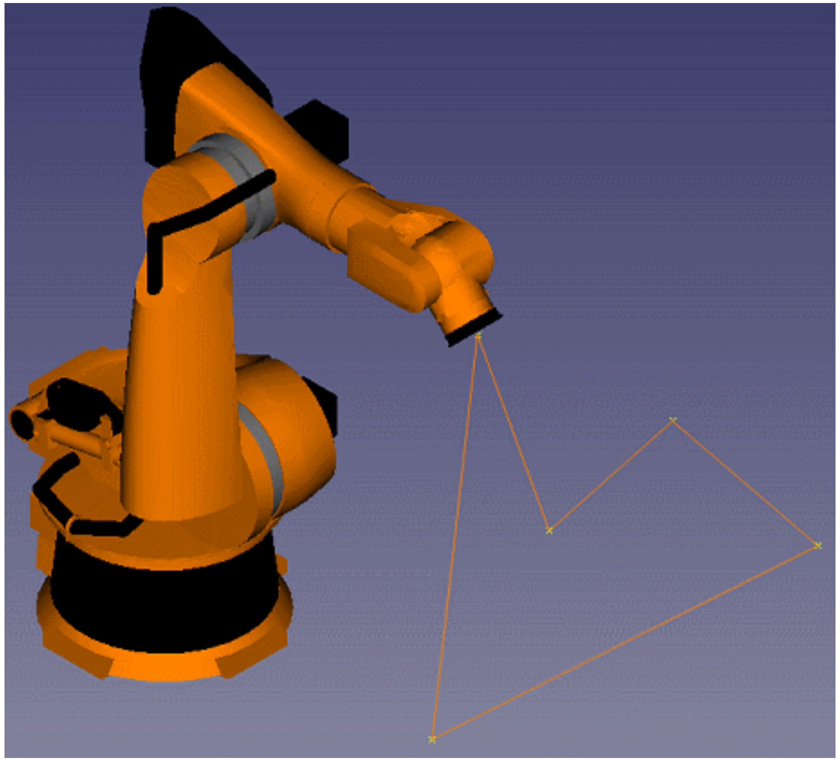
the working industrial solution

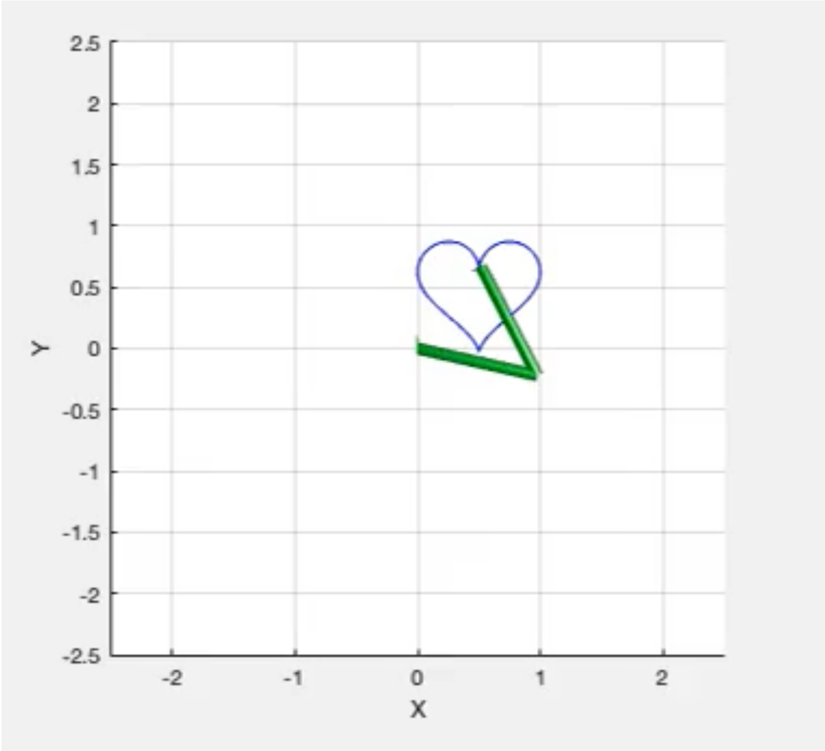
more videos on
KUKA Robotics YouTube Channel

Program

- Introduction
  - Manipulator arms (+ some on a mobile base)
  - Industrial and service applications
- Components
  - Mechanical structures
  - Actuators and transmissions
  - Sensors
    - proprioceptive (encoder, tacho)
    - exteroceptive (force/torque, depth, vision, infrared, ultrasound, laser)
- Kinematic models
  - Minimal representations of orientation
  - Direct and inverse kinematics of robot manipulators
    - Denavit-Hartenberg formalism for frame assignment
  - Differential kinematics: analytic and geometric Jacobians
  - Statics: Transformations of forces
  - Robot singularities

Planning Cartesian trajectories





video

KUKA 6R articulated robot

2R planar robot

```
t = [0:Ts:T]; tau = t/T; s = (-2*tau.^3 + 3*tau.^2); center = [0.5; 0.5];
p = center + [(16*sin(2*pi*s).^3)/16;
            (13*cos(2*pi*s) - 5*cos(4*pi*s) - 2*cos(6*pi*s) - cos(8*pi*s))/16]/2;
```

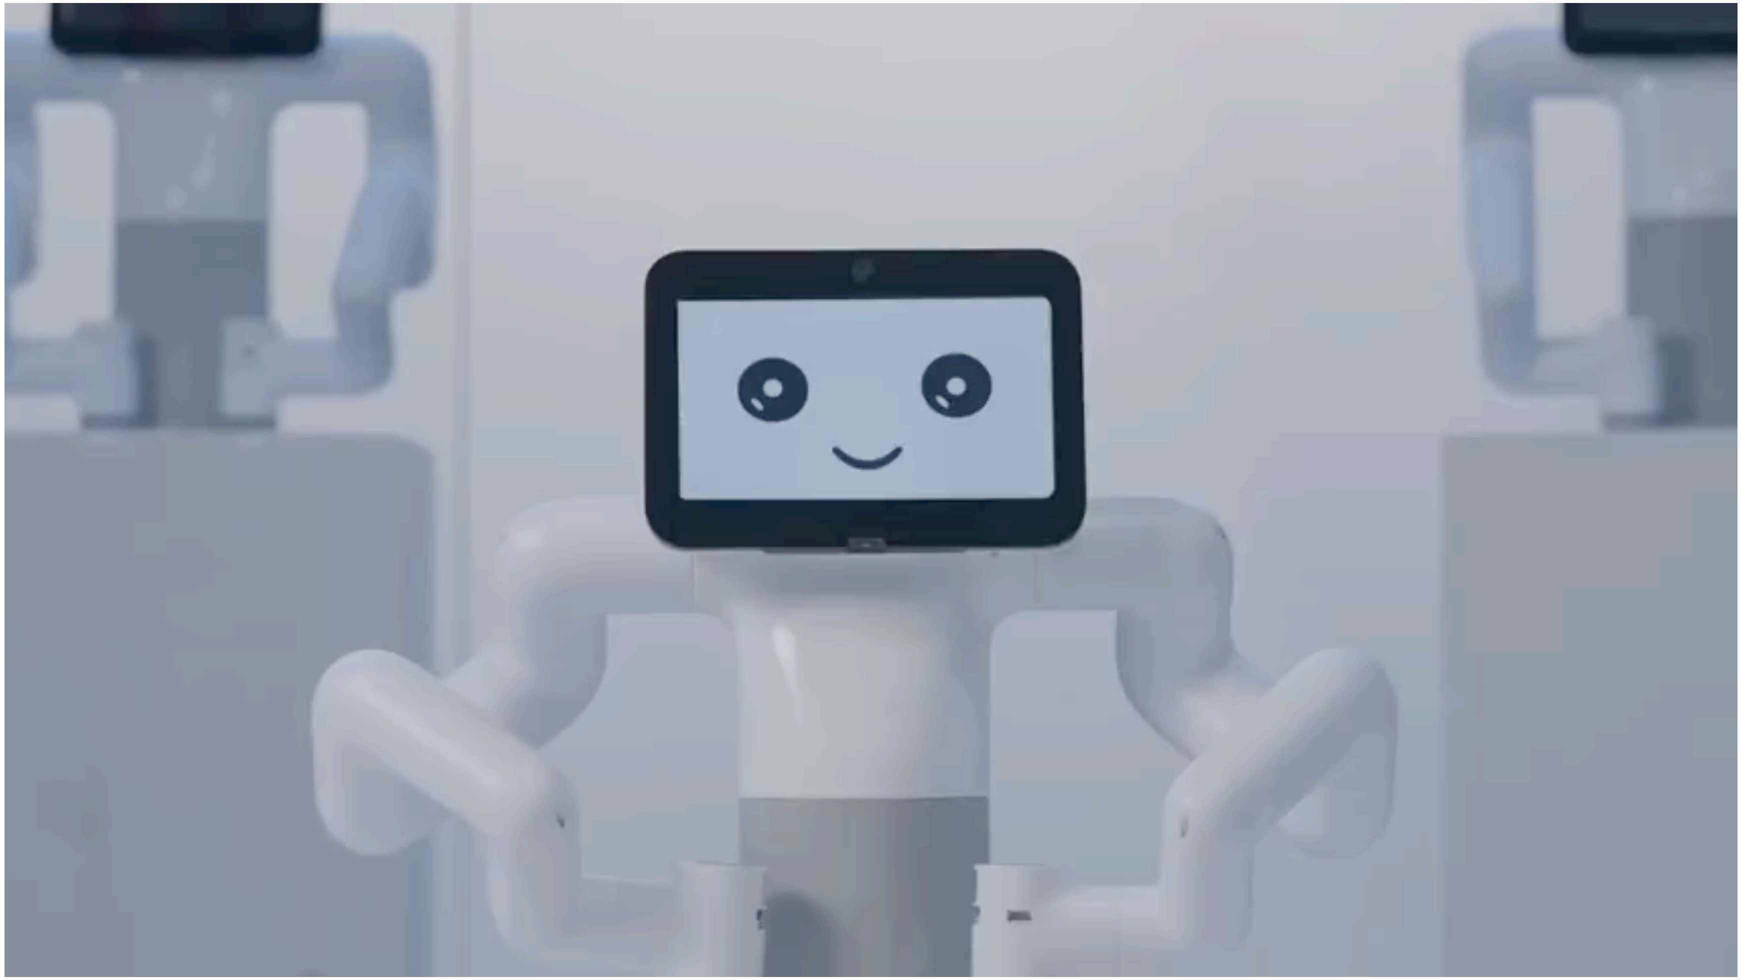
MATLAB code (Diaco & Ficorilli, Sep 2021)

Program (continued)

- Planning of motion trajectories
  - Trajectory planning in the joint space for robot manipulators
  - Trajectory planning in the task/Cartesian space
- Motion control
  - Control system architectures
  - Kinematic control laws (in joint or in task/Cartesian space)
  - Independent joint axis control laws (P, PD, PID)
- Programming and simulation
  - Programming language for industrial robots (KRL)
  - Use of Matlab/Simulink (with Robotics Toolbox) or CoppeliaSim (V-REP)

Programming motion and behavior

video



myBuddy 280-Pi dual-arm personal robot by Elephant Robotics

Exams and beyond

- Type midterm test (about mid of November) + written exam
- Schedule of 2022-23 sessions
  - 2 sessions at the end of this semester
    - between January 9 and February 17, 2023
  - 2 sessions at the end of next semester
    - between June 1 and July 21, 2023
  - 1 session after the summer break
    - between September 1 and 15, 2023
  - *2 extra sessions only for students of previous years, part-time, ...*
    - *March 13–April 14 and October 2–November 3, 2023*

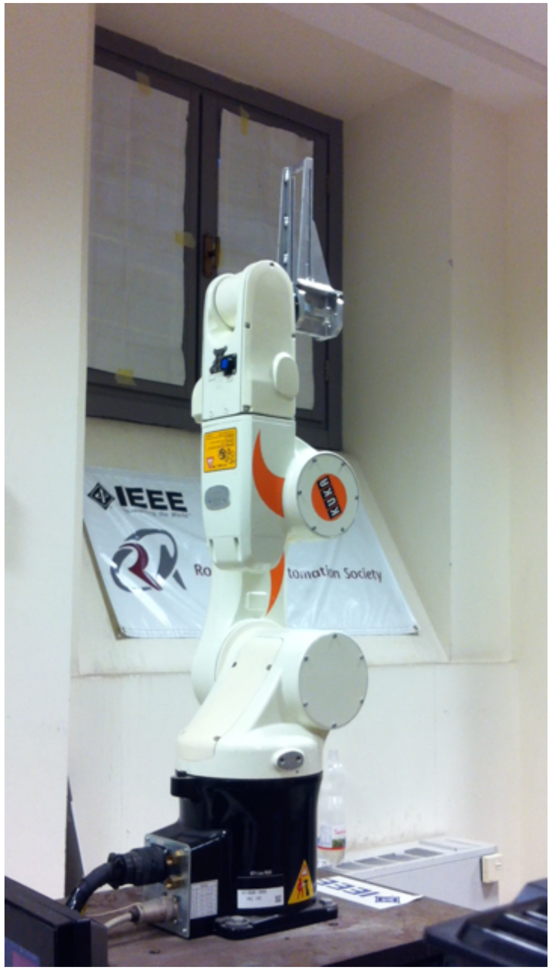
will open
on infostud
in early December
check the
course website!

- Signing up to exams
  - on infostud (up to **one week before** the date of the written exam)
- Master theses
  - samples at DIAG Robotics Lab www.diag.uniroma1.it/labrob/theses

Robot manipulators
available at DIAG Robotics Lab (S-218)

video

video



KUKA KR-5

KUKA LWR4+ (lightweight, about 14 kg)

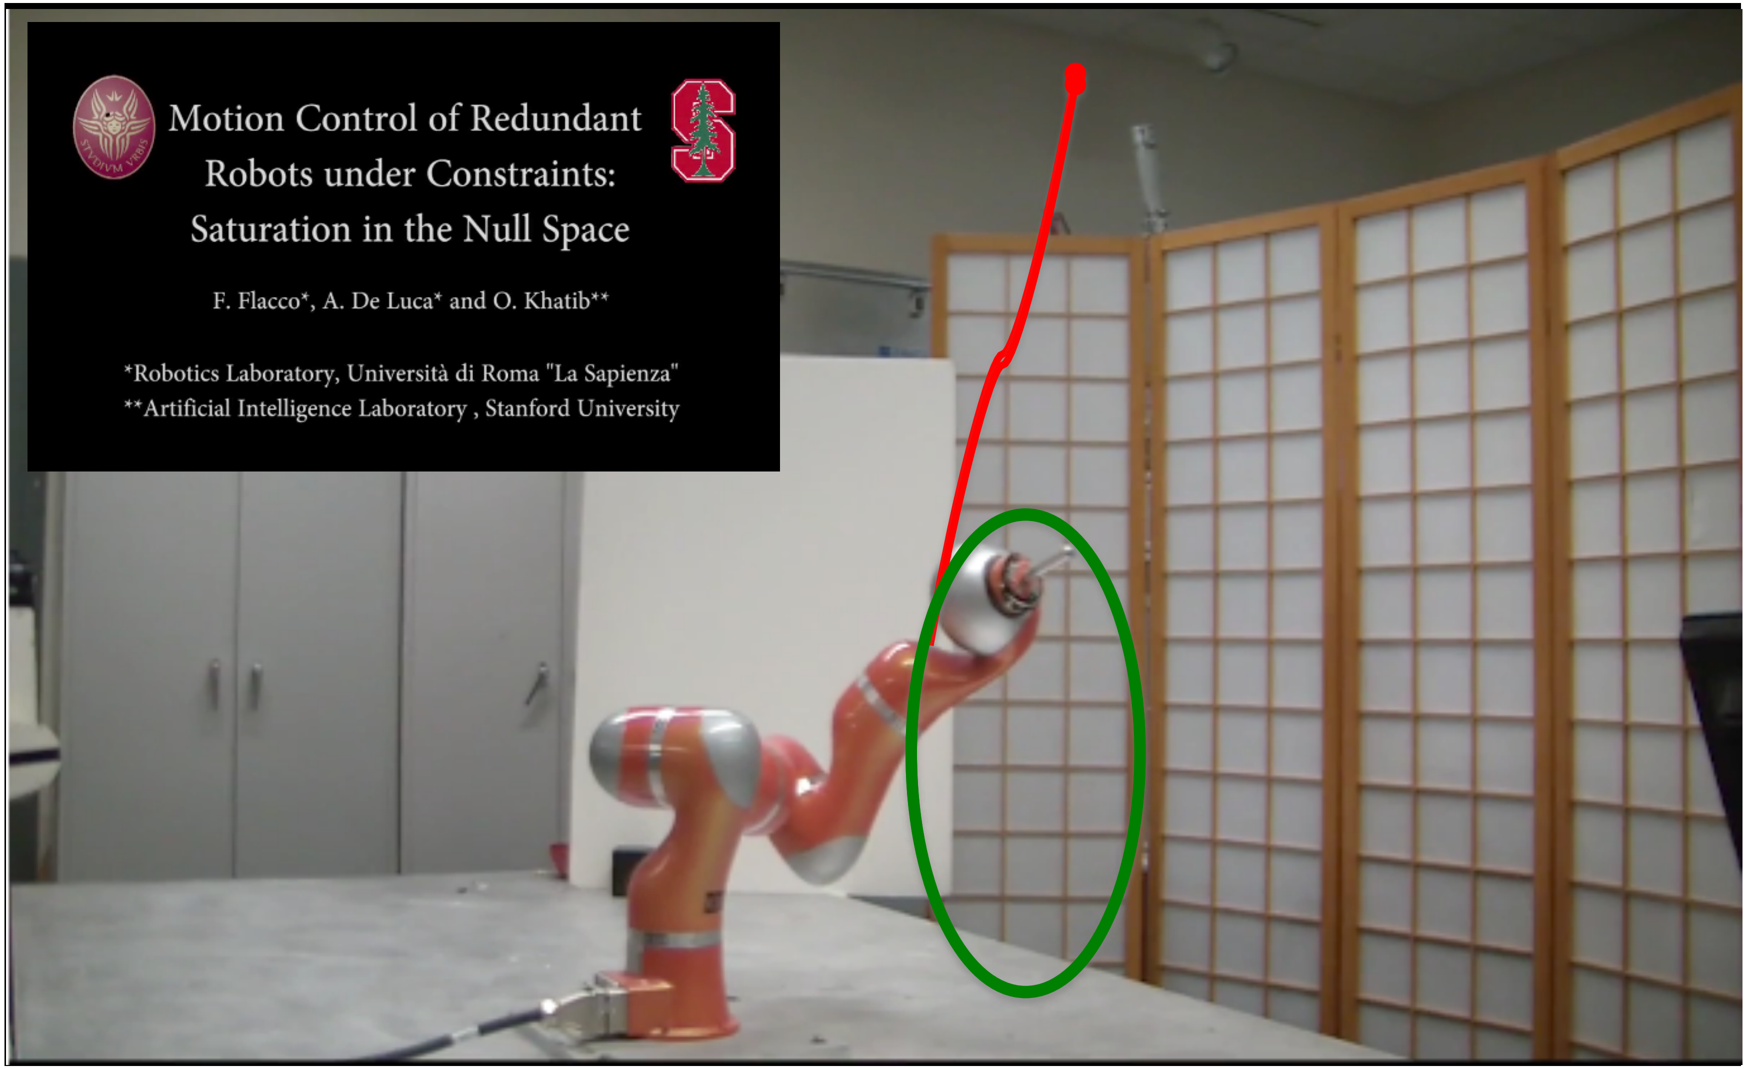
Robot manipulators
available at DIAG Robotics Lab (S-218)

commercial video

upon arrival (July 2016)

Universal Robots UR-10 (= 10 kg of payload)

Tracking a Cartesian trajectory
with hard position/velocity bounds on robot motion



video DIAG Sapienza/Stanford, IEEE ICRA 2012

Robot control by visual servoing
with limited joint motion range

video INRIA Rennes, IEEE/RSJ IROS 2011

Sensor-based robot control

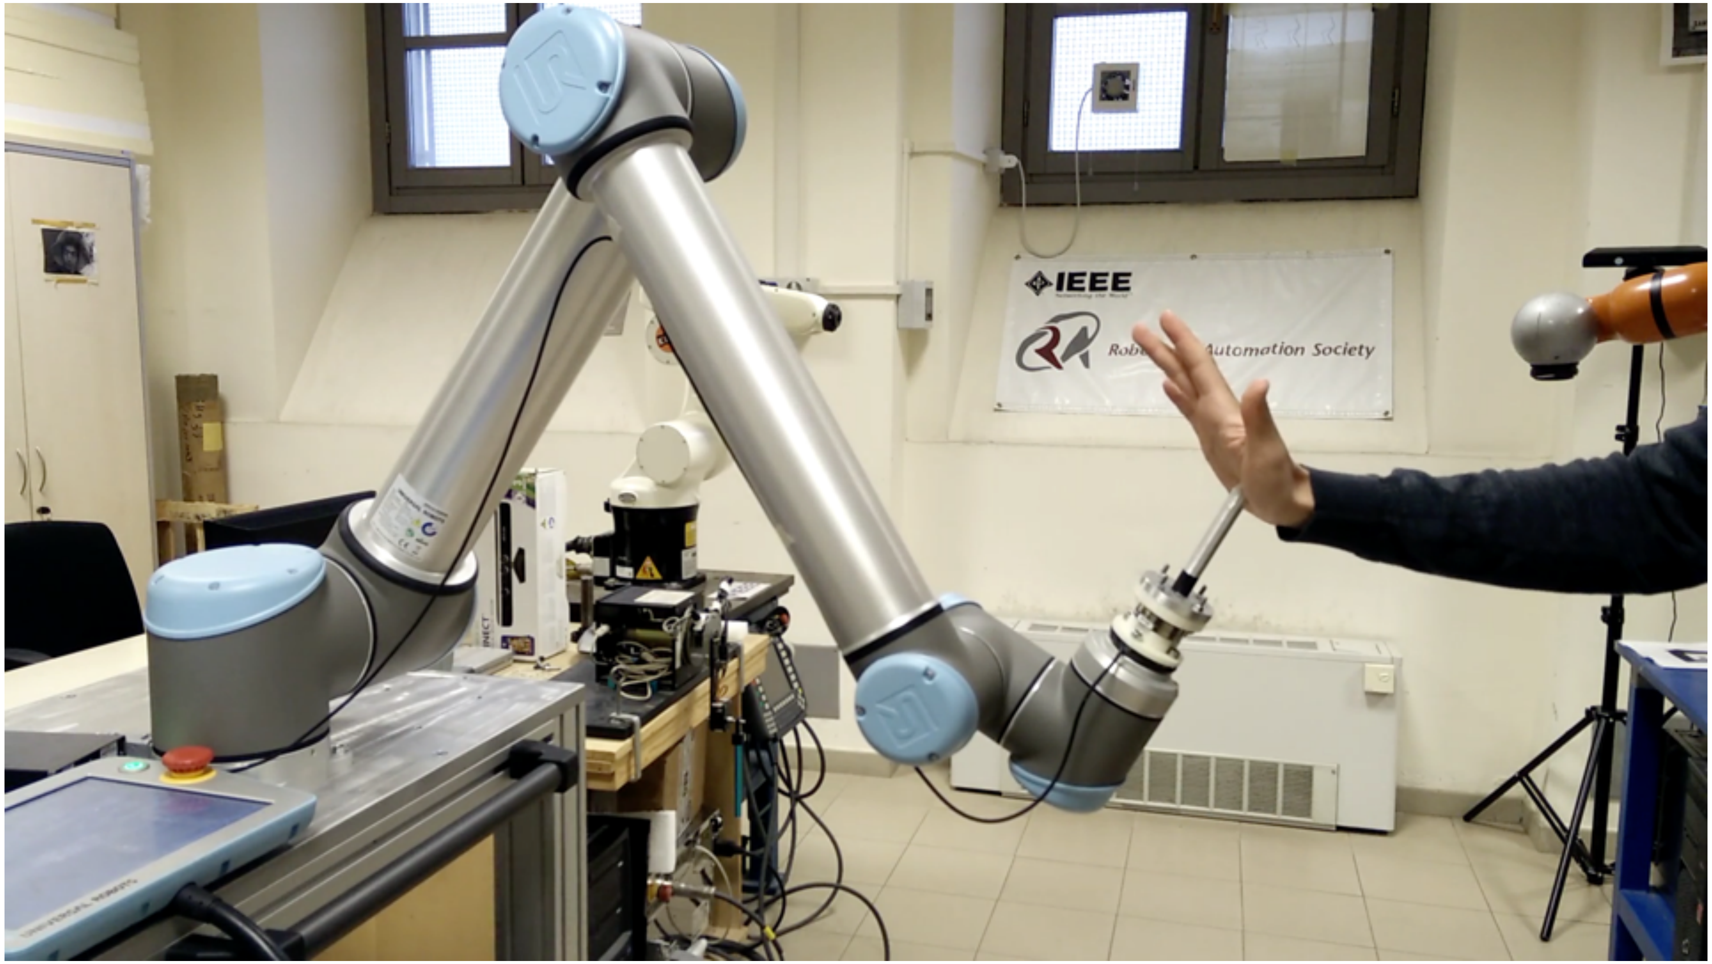
in dynamic environments (coexistence with human)

video DIAG Sapienza/Stanford, IEEE ICRA 2012

Safe physical human-robot interaction
(sensor-less (!) and on a conventional industrial robot)

video DIAG Sapienza, IEEE ICRA 2013

Human-robot collaboration
(with a real F/T and a "virtual" sensor to distinguish contacts)

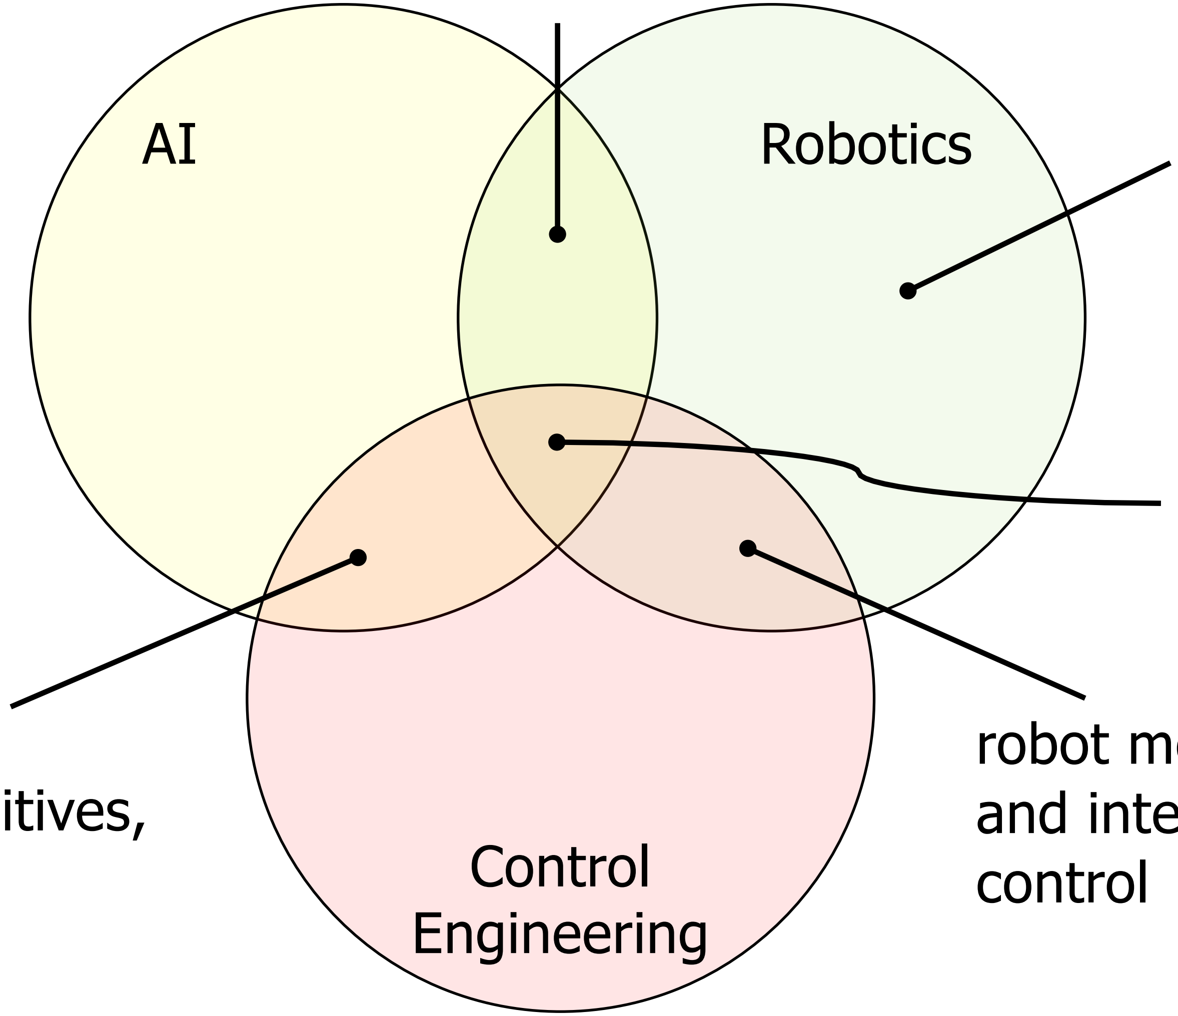


video DIAG Sapienza, J. of Mechatronics, 2018

Next generation of intelligent robots?

Robots =
embodied AI systems

Robotics =
science
of artifacts
intelligently
actuated and
interacting with
the real world



Horizon Europe (2021-27)

Agri-Food

Agile Production

Specific to Robotics

- hard physical/real-world nature of Robotics ("AI embodied")
- wide range of technologies are integrated within robotic systems
- skill mix needed for success is broader than in AI or Data alone
- robots are realizations of advanced system-level concepts
  - such as autonomy, control, sensing, perception and programming
- robots are both producers and consumers of data
  - physical model-based approaches, generation of data-driven models
- decision makers and general public need a better understanding of what Robotics is and can achieve, and how it can be deployed
  - Fukushima, Covid19, ….

AI & Robotics point of views

example with one of the cross-sectorial technology enablers

one enabling technology

… its relations with the other technologies

	Sensing and Perception	Knowledge and Learning	Reasoning and Decision Making	Systems, Hardware, Methodologies and Tools
Action and Interaction	Depends on sensing of motion and mechanical properties Relies on perception for interaction Uses recognition of actions and sequences of interactions in people	Gets semantic knowledge around objects and human actions Gets data on objects and places	Depends on real-time context-aware decision making Trusted decision making	Depends on fast reactive architectures for control Relies on edge-based AI Requires assurance of safe operation and data privacy

Real-time interpretation of multi-modal data

Safe monitoring in human environments

Active exploration strategies

Adaptive decision-making models from sparse data

Planning and re-planning under uncertainty and incomplete knowledge in dynamic environments

Real-time control (distributed/decentralized)

Safe control of physical human-interaction

Agility (speed and strength) of collaborative robots

InterAction Technology (lightweight, compliant & soft devices/materials)

Energy-efficient, robust and sustainable design

Robotics around the world...

Springer Handbook of Robotics (2nd Edition, July 2016)

Preview of Robotics 2

6 credits, II semester, year 1

- Advanced kinematics / Robot dynamics
  - Calibration
  - Redundant robots
  - Dynamic modeling: Lagrange and (recursive) Newton-Euler methods
  - Identification of dynamic parameters/coefficients
  - Geometrically constrained dynamics
- Control techniques
  - Free motion linear/nonlinear feedback control, robust control, adaptive control, iterative and online learning
  - Constrained motion admittance, impedance, hybrid force-motion control
  - Visual servoing (kinematic approach)
- Special topic
  - Diagnosis and isolation of robot actuator faults

Other courses on Robotics and Control

- Autonomous and Mobile Robotics (6 credits), I semester, year 2
  - kinematics, planning, control of wheeled and legged mobile robots
  - motion planning with obstacles, navigation, and exploration
  - Prof. Oriolo www.diag.uniroma1.it/oriolo/amr
- Medical Robotics (6 credits), II semester
  - robot surgical systems, haptics, and more ...
  - Prof. Vendittelli (follow link at http://www.diag.uniroma1.it/vendittelli)
- Elective in Robotics (12 credits) or Control Problems in Robotics (6 credits)
  - I-II semesters, starting this semester
  - 4 modules of 3 credits (for CPR, MCER students take 2 modules out of the 4 in EiR)
  - research-related subjects: e.g., physical Human-Robot Interaction (pHRI)
  - multiple instructors www.diag.uniroma1.it/vendittelli/EIR
- Robot Programming (3 credits, no mark), I semester, year 1
  - robot programming using C++, modules with ROS, embedded real-time coding
  - Prof. Grisetti sites.google.com/diag.uniroma1.it/robotprogramming202223/home
